

MODEL MS8300

ProSecurity

PROGRAMMABLE FEATURES

REMOTE PROGRAMMABLE OPTIONS

1. **Ignition Controlled Door Locking / Unlocking.** Automatically locks the doors when the ignition is turned on and unlocks the doors when the ignition is turned off.
2. **Logic Sensor II - Warn Away Level.** Allows you to set the level of the Logic Sensor II's Warn Away sensitivity.
3. **Logic Sensor II Defeat by Remote.** When selected, this feature will allow the user to temporarily disable the Logic Sensor II using the Remote Transmitter.
4. **Audible Tamper Alert Report.** Selects between chirp and LED indication or LED indication only for Tamper Alert upon disarming.
5. **Door Unlock Pulse - Single/Double.** Selects between a *single* pulse or a *double* pulse door unlock output for use with many late model vehicles such as Nissan and Volkswagen.
6. **Siren Duration - Instant Triggers.** Selects between a 20 second and a 40 second siren duration when the system is triggered by the doors, hood/trunk, or ignition.
7. **Siren Duration - Sensors.** Selects between a 20 second and a 40 second siren duration when the system is triggered by the Logic Sensor II or optional sensors.
8. **Radar Sensor - Warn Away Trigger.** Sets the system to trigger if it senses 3 violations on the Radar Sensor Warn Away input within 15 seconds.
9. **Full Time System Diagnostics Delay - 0 or 20 seconds.** Ungo's Full Time System Diagnostics continuously monitors the protected zones, even when the system is disarmed, and warns the user of an open door, hood, or trunk switch by emitting two chirps.
When set for 20 seconds, the delay will only allow the system to emit the warning chirps if a protected zone has been open or defective for at least 20 seconds.
10. **Auxiliary Function 2 - Momentary / Latched / Timed Operation. (resets with arm and disarm)**
Momentary operation provides an output for as long as the Transmitter button is held.
Latched operation provides an output that turns on when the transmitter button is pressed and turns off when pressed again.
Timed operation provides an output that turns on for 30 seconds.
When the Latched or Timed outputs are activated for Aux. 2:
 - **Arming** the system will turn off the Aux. 2 output if it was turned on while the system was disarmed.
 - **Disarming** the system will turn off the Aux. 2 output if it was turned on while the system was armed.
11. **Auxiliary Function 3 - Momentary / Latched / Timed Operation.** Selects between Momentary, Latched, or Timed output for Aux. 3.
The operation of Aux. 3 is *not* affected by arming and disarming.
